

When You Are Developing Designs for a Project Waterjets Can Produce the Impossible

Are you in the process of designing or bidding on a project? Waterjets Unlimited can provide you with the ability to bring your ideas to life.

Our specialized robotic waterjet cutting process allow complex and intricate shapes to be cut in virtually any material, cleanly and precisely, in a cost-effective manner.

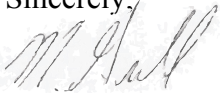

Because of the waterjet process, you are not restricted in your designs. Materials cut by our organization are not affected by heat or mechanical stress, and our process is environmentally friendly and does not release any emissions, pollutants or harmful waste.

From a single piece to a high volume project, Waterjets Unlimited brings you the results you need: material cut to your specifications with precision, accuracy and a satin smooth finish.

Residential and Commercial applications including signage, flooring, glass, metal and granite materials are our specialty. Please visit our website or give us a call to learn more about Waterjets Unlimited.

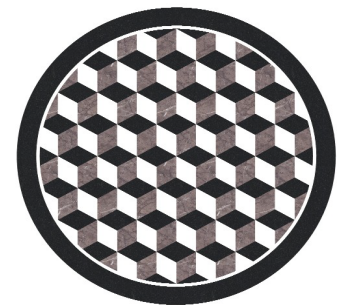

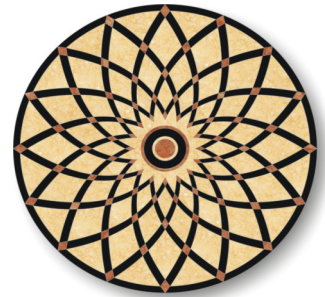

We look forward to serving you.

Sincerely,

Mark Grindel
President

As Seen at the Show

The medallions showcased at the AIA Long Island Chapter Product Fair held Wednesday, June 10, 2009 were crafted from Forbo Marmoleum Flooring Product. This type of intricate detail can be accomplished with other materials to meet the needs of your project. To get started all we need is a hand-drawn sketch, an actual picture, a CAD file, or an image found on the internet, etc. We take care of the rest, and will provide you with the completed project or, if it's a large project, labeled parts for the easy installation of your design.
